

Packaging Recommendations

Paraffin Blocks

If possible wrap blocks individually in gauze or tissue paper; and place blocks in insulated styrofoam boxes you can locally purchase or in sturdy cardboard boxes. Fill empty space with tissue paper to not allow any shaking. Then tape around edges of the styrofoam/ cardboard box. Finally place in a larger cardboard box, together with the slides boxes, again well padded to not allow any shaking. (Although the first step of individually wrapping it in gauze or tissue paper can be omitted, but it is recommended.)

Please DON'T wrap blocks in bubble wrap or plastic as the plastic can stick to the paraffin. Bubble wrap has melted into the blocks destroying them.

Glass Slides

Please DO place glass slides in hard plastic, top loading slide containers, so that the slides do not rattle, and fill with tissue paper; place all in a sturdy cardboard box to prevent breakage. Please send package as 'Fragile'.

Please DON'T send slides in side-loading plastic containers or cardboard envelopes. Slides are prone to break as the cardboard bends.
